

## Spectral Response of photodiodes with cut-off 2.4 $\mu\text{m}$

Photodiodes PD24 structure:

Here are presented typical curves of response vs wavelength at room temperature. 2.4  $\mu\text{m}$  cut-off is measured at 10% of the maximum responsivity. Besides standard models PD24 based on heterostructure with AlGaAsSb wide band-gap “window”, narrow spectrum photodiodes (PD24n) with GaSb “window” are also available.
